FOCUSED AI GOVERNANCE REVIEW

Who can approve a production AI release?

A product team asks whether its policy and release record establish approval for release R17.

Scope

Review the role and approval record for R17 only.

Evidence reviewed

E1 Release policy v3, section 4: the product owner must approve production release.

E2 R17 release ticket: engineering readiness is recorded and the owner approval field is blank.

E3 Role register: the product owner role is assigned for the relevant product.

Findings

Authority
E1 and E3 identify the role that can approve R17.

Recorded approval
UNESTABLISHED: E2 shows engineering readiness but does not record approval by the product owner.

Consequence
The supplied record does not establish that the release approval requirement was met.

Limits

The review covers the supplied records for one release and does not establish whether approval exists elsewhere.

Next step

Check for a release-specific approval by the product owner and link it to R17.
